## Claims

- 1) Peptide variants of MUC1 within the VNTR (variable number of tandem repeats) domain comprising 20 as which deviate at positions 9 and 18 and / or 19 from the well-known VNTR domain.
- Peptide variants according to claim 1, characterized by the SEQ ID No. 2 sequence PAPGSTAPPAHGVTSAPESR (PAP20-ES).
- 3) Peptide variants according to claim 1, characterized by the SEQ ID No. 3 sequence PAPGSTAPAHGVTSAPESR (PAP20-AES).
- 4) Immunogenic substances / reagents characterized by their content of at least one of the peptides specified under claims 1 (2) or the SEQ ID No. 1 sequence PAPGSTAPAHGVTSAPDTR (PAP20-A).
- 5) Antigenic substances / reagents characterized by their content of at least one of the peptides specified under claim: 1 to 3 or the SEQ ID No. 1 sequence PAPGSTAPAHGVTSAPDTR (PAP20-A).
- 6) Test kit for the determination of identity and incidence of DNA mutations within the VNTR domain, which contains at least one of the primer sequences corresponding to one of the peptides specified under claims 1 to 5 or the SEQ ID No. 1 sequence PAPGSTAPAHGVTSAPDTR (PAP20-A).
- 7) Use of these peptides specified under claims 1 to 3 or the SEQ ID No. 1 sequence PAPGSTAPAAHGVTSAPDTR (PAP20-A) for the generation of cancerostatic remedies, especially for the generation of effective vaccines in a tumor therapeutic context.
